(Nuclear weapons, biological and chemical weapons)

All apparatus, parts, equipment, installations, substances and organisms, which are used for
civilian purposes or for scientific, medical and industrial research in the fields of pure and
applied science shall be excluded from this definition. The substances and organisms of
numbers 3 and 5, as far as they serve the purpose of prevention, protection and proof shall

radioactive isotopes and which is capable of mass destruction, mass injury or mass
poisoning.

2. Any part, device, assembly or material especially designed for, or primarily useful in, any
weapon as set forth under paragraph (1), where no licences subject to the Atomic Energy
Act have been granted.

Definition:

Nuclear fuel includes plutonium, uranium 233, uranium 235 (including uranium 235 contained
in uranium enriched to over 2.1 per cent by weight of uranium 235) and any other material
capable of releasing substantial quantities of atomic energy through nuclear fission or fusion
or other nuclear reaction of the material. The foregoing material shall be considered to be
nuclear fuel regardless of the chemical or physical form in which they exist.
